Business Scope and SDGs

The services that Naotomi Shoji itself provides to all sectors of society are closely related to the SDGs.

We aim to grow further towards a sustainable, diverse, and inclusive society that leaves no one behind.

Business Philosophy

- Become a company loved and needed by the local community
- Become a company where employees can be happy both materially and spiritually

Action Guide

- Safety and compliance first, business second
- Everything is thought and acted from the customer's point of view
- Always maintain a strictness that is neither reproachful nor too intimate

Global issues

Global Environment

- Marine plastic pollution
- Global warming by CO₂
- Abnormal weather and meteorological disasters
- Loss of biodiversity due to deforestation

Stakeholders

- [Customer] Safe, reliable, proper and easy disposal of difficult-to-treat waste
- [Local community] Communicate the importance of recycling to children, consider the environment, and contribute to the community.
- [Employee] Respect for hope, work-oriented, cultural diversity, and health first.

SUSTAINABLE DEVELOPMENT GOALS

Aiming to achieve SDGs by solving world issues through business activities and CSR activities

Business Activities

Industrial waste

Transport and intermediate treatment of industrial waste. Recyclable varieties are reused after intermediate treatment. High-precision screening reduces the amount of waste in landfills and contributes to the protection of the global environment.

General waste

Collection of general waste, household waste, oversized waste, etc. In addition, as a private undertaker of administrative services, we are also engaged in the recycling of sofas, mattresses, tires and household appliances.

Waste Paper and Confidential Documents

Waste paper and confidential documents discharged from stores and offices, etc., and supply them to manufacturers. It is then processed into new paper. Some waste paper is also exported to Asia.

Old clothes

The old clothes are sorted and mainly exported to Southeast Asia. Japanese used clothes are of good quality and very suitable for reuse. Clothing that does not meet the standard will be used in industrial cleaning cloth etc.

Metal scrap

Metal scrap is recycled and processed to supply electric furnace manufacturers, etc. Sorting and processing to improve quality. Scrap metals such as wires, motors, radiators and air-conditioning copper pipes are also exported to Asia.

Plastic

As a measure to solve the problem of marine plastic waste, we recycle and process used plastic and supply it to manufacturers.

Food waste

The food waste discharged from hotels, supermarkets, convenience stores, etc. is dried to make compost and shipped as raw materials for feed and fertilizer.

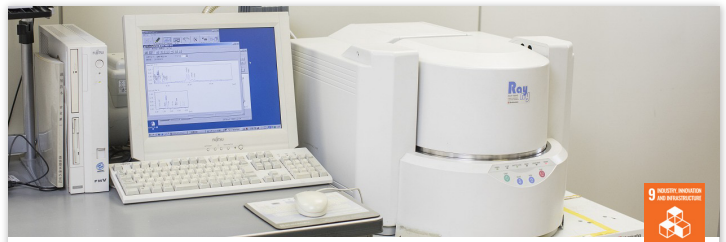

Building maintenance

Comprehensive management of the building with equipment management and cleaning.

Dismantling works

Dismantling of buildings, factories, houses, etc. Metal, wood and concrete dismantled from the site are recycled as resources.

Technology R&D and Analysis

In the environmental field, research and development is centered on recycling technology, environmental measurement certification, and waste characteristic analysis. Every day, we are working on the development of recycling technology for difficult-to-handle items that will appear in the future.

CSR Activities

Dedication to Community Sports

Provide educational opportunities on recycling

Landscaping Activities

Hold a symposium with local residents

Employee health management

Incentives such as employee recognition

etc.
